

# FAMOUS CASE ARGUMENT

Proof that it is possible for  $a, b$  to be irrational and  $a^b$  to be rational:

Is  $\sqrt{2}^{\sqrt{2}}$  rational? I don't know, but...

If yes, then  $a, b, a^b$  are  $a = \sqrt{2}, b = \sqrt{2}, a^b = \sqrt{2}^{\sqrt{2}}$

If no, then  $a = \sqrt{2}^{\sqrt{2}}, b = \sqrt{2}, a^b = (\sqrt{2}^{\sqrt{2}})^{\sqrt{2}} = (\sqrt{2})^2 = 2$

So either way, there is some  $a, b$  like this

# PROOFS IN BOOLEAN LOGIC

Wednesday, 12 February

# CASE ARGUMENT

Example:

$a=b$

$\text{Cube}(a) \vee \text{Tet}(a)$

$\text{Cube}(b) \vee \text{Tet}(b)$

# CASE ARGUMENT

Example:

$a=b$

$\text{Cube}(a) \vee \text{Tet}(a)$

$\text{Cube}(b) \vee \text{Tet}(b)$

1.  $a=b$

2.  $\text{Cube}(a) \vee \text{Tet}(a)$

# CASE ARGUMENT

Example:

	a=b
	Cube(a) $\vee$ Tet(a)
	_____
	Cube(b) $\vee$ Tet(b)

	1. a=b
--	--------

	2. Cube(a) $\vee$ Tet(a)
	_____

	3. Cube(a)	(for $\vee$ -elim)
	_____	

# CASE ARGUMENT

Example:

	a=b
	Cube(a) $\vee$ Tet(a)
	-----
	Cube(b) $\vee$ Tet(b)

1. a=b

2. Cube(a)  $\vee$  Tet(a)

	3. Cube(a)	(for $\vee$ -elim)
	-----	

	4. Cube(b)	= elim: 1,3
--	------------	-------------

# CASE ARGUMENT

Example:
