

You are given four cards with a number on one side and a letter on the other. You can only see one side of each card.

Which card(s) do you have to turn over in order to fully test the following rule:

If there is a vowel on one side of the card, then there is an even number on the other side.

You are given four cards with a drink on one side and an age on the other. You can only see one side of each card.
