

Philosophy 3334 Summer 2018
Reading questions #10
Due Tue, June 19th

1) Read David Buller's "Adapting Minds: Evolutionary Psychology and the Persistent Quest for Human Nature" (Chapter 3 of *Arguing about Human Nature*). Buller says that species (such as *Homo sapiens*) are not natural kinds but are instead individuals. Why are species not natural kinds? And what does it mean to say that species are individuals?

2) After reading the chapter, come up with a question that you want answered or a topic that you would like to be discussed. This could be something that the chapters forced you think about or it could be something that you thought was particularly confusing in the chapters.
